The importance of bonding and grounding in commercial, industrial, and institutional buildings cannot be overstated. The grounded circuits of machines need to have an effective return path from the machines to the power source in order to function properly. In addition, non-current-carrying metallic components in a facility, such as equipment cabinets, enclosures, and structural steel, need to be

If you've been doing some 2D modeling, you most likely have run into what I call nuisance cell errors. You see them while your model is running and they can really slow down your simulation as the RAS chugs through iterations to try to come to a solution.

The RAS Solution

A ground system must meet NEC (National Electrical Code) Article 250 requirements. The NEC [2] defines "grounded" as "Connected to earth or to some connecting body that serves in place of the earth" and "effectively grounded" as "intentionally connected to earth through a ground connection or connections of sufficiently low impedance and having sufficient current carrying capacity to prevent ...
