Antimicrobial resistance (AMR or AR) is the ability of a microbe to resist the effects of medication that once could successfully treat the microbe. The term antibiotic resistance (AR or ABR) is a subset of AMR, as it applies only to bacteria becoming resistant to antibiotics. Resistant microbes are more difficult to treat, requiring alternative medications or higher doses of antimicrobials.

Antimicrobial resistance - Wikipedia

For the topic of Microbial Control (killing microbes), students will be designing and completing their own experiment on a microbial control. Before beginning this experiment, you must discuss what you plan to do with your instructor and pick up the supplies that you will need in lab.
